Amendment
Attorney Docket No. S63.2B-10039-US01

Amendments To The Claims:

Claims 1-22. (Canceled)

Claim 23. (New) A stent having a longitudinal axis, the stent comprising a first coil and a second coil, the first coil having a length and the second coil having a length, the first coil and the second coil sharing the same longitudinal axis along their length, the stent constructed and arranged such that upon expansion of the stent, the first coil and the second coil are disposed about different longitudinal axes.

Claim 24. (New) The stent of claim 23 further comprising at least one segment in a form other than a coil and being balloon expandable or self-expandable.

Claim 25. (New) The stent of claim 23 wherein the first coil and the second coil wind in opposing directions.

Claim 26. (New) The stent of claim 23 wherein the first coil and the second coil wind in the same direction.

Claim 27. (New) The stent of claim 23 wherein at least one of the first coil and the second coil is balloon expandable.

Claim 28. (New) The stent of claim 23 wherein at least one coil is formed of a plurality of braided filaments.

Claim 29. (New) The stent of claim 28 wherein the filaments are made of spring steel.

Claim 30. (New) The stent of claim 24 wherein the first coil and the second coil extend from the segment which is a form other than a coil.

Claim 31. (New) The stent of claim 23 wherein at least one of the first coil and the second coil has an outer diameter of no more than 6 mm when deployed.

Claim 32. (New) The stent of claim 23 having a length of no more than 20 mm.

Amendment
Attorney Docket No. S63.2B-10039-US01

Claim 33. (New) A method of treating a bodily vessel comprising the steps of:
providing a catheter, the catheter including a stent, the stent comprising a first coil
and a second coil, the first coil having a length and the second coil having a length, the first coil
and the second coil sharing the same longitudinal axis along their length, the stent constructed
and arranged such that upon expansion of the stent, the first coil and second coil are disposed
about different longitudinal axes;

delivering the stent to a desired location in the bodily vessel,

deploying the first coil and the second coil.

Claim 34. (New) The method of claim 33 wherein at least one of the first coil and the
second coil is deployed across an aneurysm.

Claim 35. (New) A method of manufacturing a stent comprising the steps of:
providing a first coil, a second coil, and a non-coil segment;
attaching the coil segments to the non-coil segment.

Claim 36. (New) The method of claim 35 wherein the first coil and second coil are
adhesively bonded to the non-coil segment.

Claim 37. (New) The method of claim 35 wherein the first coil and second coil are welded
to the non-coil segment.
